

Logistics & Other Services

Product Design and Prototyping

With our in house experience and knowledge in metal work, solid surface and joinery, Alser (UK) Ltd is able to help its' customers design and develop all types of retail display products; taking them through from the first processes of CAD drawings, prototyping and costing, to the final stages of manufacturing, distribution and installation.

Storage & Refurbishment Facilities

For our current clients we help them to maximise their equipment longevity, or just have spare parts for older systems within existing premises. We offer a storage, sorting and refurbishment facility in both joinery and metal products which helps to keep costs down for maintenance and future projects..

To help our customers potentially reduce costs, we can also offer storage and collation services in our warehouse facilities.

Project Picking & Distribution

Over the last 20+ years we have provided our customers with this facility. If you have a project that requires more than one of your suppliers components, we are happy to have all your suppliers deliver into our warehousing facilities, where we will collate all the products together, and deliver to one or multiple locations. We can even offer to install and merchandise the components if required, giving you a single point of contact option saving you manpower and time co-ordinating the operations yourself.
